

EOD-Net

Centralised Information Library for EOD Operators

Plug and Play Solutions for Sensor Connectivity

A web based application that allows the storage of vital operational information on data concerning Unexploded Ordnance and Improvised Explosive Devices from EOD operators in the field. The system allows immediate access to the data thus ensuring that any authorized operator has up-to-date tactical and strategic information. This information can be shared, if appropriate with other EOD teams or organizations.

The system has a comprehensive search function to data-mine for all or individual incident information that has been processed.

Add-on Modules:

- Translation module; translation of software into any language.
- GIS interface with MapInfo or ESRI GUI.
- Integration of National Databases
- Complete bespoke client solution available.
- Ability to interact with the EOD-Frontline software to send incident reports directly into the system with attached documents, pictures, movies, etc.

BECAUSE UNCERTAINTY IS THE GREATEST THREAT

Key Features

Knowledge Sharing

All teams have instant access to data from previous incidents as soon as it is entered into the system. Documents and media files (pictures, X-Ray and video) can be connected to the incidents.

Centralized Data Storage

EOD-Net stores all data centrally, which enables the connected users to have access to the data whenever it is required. Data backup is simple and straightforward.

Statistical Analysis

EOD-Net can present the entered data from several operations and give a clear picture of the overall situation. Data can be filtered and analyzed at both the tactical and strategic level to highlight developing trends.

Focused Research and Development

Based on the analyzed data, research and development can be initiated. New Training, Tactics and Procedures or equipment needs can be identified.

Intelligence Fusion

When the incident data is collected and presented in an ordered fashion, new connections and similarities in technical and operational methods will be easier to recognize.

Integrated Quality Assurance and Control

EOD-Net can contain personnel professional qualifications and equipment maintenance levels for teams deployed on operations. Data capture can be integrated into the processes hereby creating a platform for a dynamic use of recording information.

Different Perspectives

The system arranges and presents the incident data in structured views allowing access to incident categories, specific operations, periods of time and specific devices.
